[4.52 – Alter Index General]

The screenshot shows the 'ALTER Index' dialog box for the index 'SYS_C0016047' in the 'SCOTT' schema. The 'General' tab is active, displaying various configuration options for the index. The index type is set to 'NORMAL'. The table it belongs to is 'TOOLKIT', which is a 'TABLE' with 'UNIQUE' uniqueness and 'NOCOMPRESS' compression. The index is located in the 'USERS' tablespace. The 'Attribute' section includes settings for 'Percent Free' (10), 'Initial Extent' (40960), 'Next Extent' (40960), 'Initial Trans' (2), 'Max Trans' (255), 'Free Lists' (1), 'Free List Group' (1), 'Min Extents' (1), 'Max Extents' (505), 'Pct Increase' (50), and 'Buffer Pool' (DEFAULT). The 'Allocate Extent' checkbox is unchecked, and the 'Deallocate Unused' checkbox is also unchecked. The 'Parallel Degree' is set to 1. The 'Rebuild' checkbox is unchecked, and the 'Usable' and 'Logging' checkboxes are checked, while the 'Enable' checkbox is unchecked. The 'Refresh', 'Exit', and 'Apply' buttons are visible at the bottom of the dialog.

 - 가 .

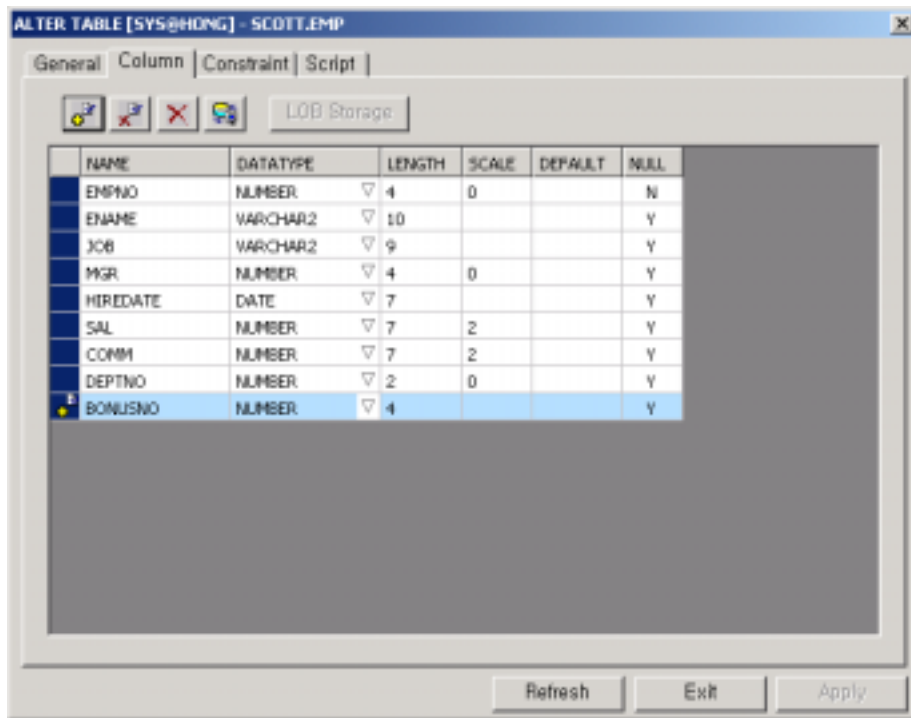

[4.55 – Alter Table General]

The screenshot shows the 'ALTER TABLE [SYS@HONG] - SCOTT.EMP' dialog box with the 'General' tab selected. The 'Schema' is 'SCOTT' and the 'Table' is 'EMP'. The 'Attribute' section includes a 'Tablespace' dropdown set to 'SYSTEM'. Below this are several pairs of input fields: 'Percent Free' (10) and 'Initial Extent' (12288 Bytes); 'Percent Used' (40) and 'Next Extent' (12288 Bytes); 'Initial Trans' (1) and 'Min Extents' (1); 'Max Trans' (255) and 'Max Extents' (249); 'Free Lists' (1) and 'Pct Increase' (50); and 'Free List Group' (empty) and 'Buffer Pool' (DEFAULT). There are two sections for extent management: 'Allocate Extent' (unchecked) with fields for 'Size', 'Datafile', and 'Instance'; and 'Deallocate Unused' (unchecked) with a 'Keep Size' field. A 'Parallel' section is also present with a 'Degree' field. At the bottom, there are four checkboxes: 'Table Lock' (checked), 'Logging' (checked), 'Cache' (checked), and 'Monitoring' (unchecked). The dialog concludes with 'Refresh', 'Exit', and 'Apply' buttons.

[6.8 – Trace Method]

The screenshot shows the Oracle SQL Developer interface. The top pane contains the following SQL query:

```
1 select emp.ename  
2 from emp e, dept d  
3 where e.deptno = d.deptno  
4 and d.dname = 'SALES';
```

The bottom pane displays the execution plan for the query, showing a join operation between the DEPT and EMP tables. The DEPT table statistics are as follows:

Column Name	Nullable	Column Type	Distinct	Buckets
DEPTNO	NOT NULL	NUMBER(2)	4	
LOC		VARCHAR2(13)	4	
DNAME		VARCHAR2(14)	4	

The DEPT table index information is:

```
INDEX  
PK_DEPT : DEPTNO  
Type=NORMAL, Unique=YES, Distinct=N/A, Rows=N/A, Last Analyze=N/A
```

The EMP table statistics are as follows:

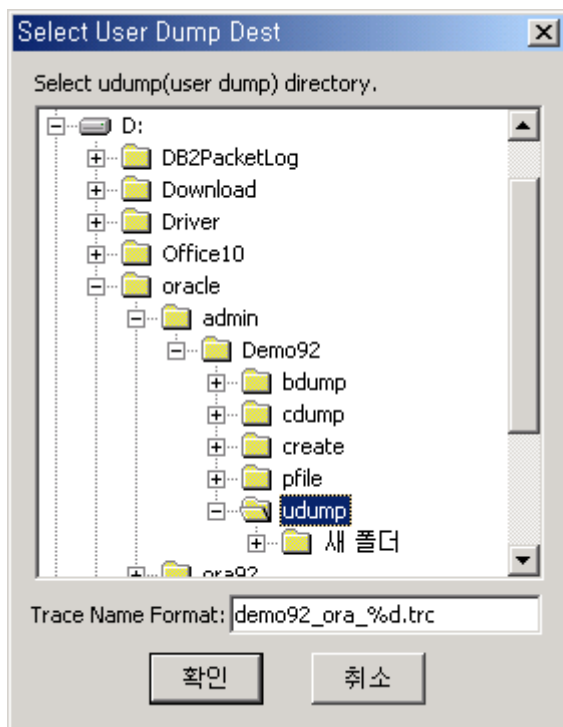

Column Name	Nullable	Column Type	Distinct	Buckets
EMPNO	NOT NULL	NUMBER(4)	14	
ENAME		VARCHAR2(10)	14	
JOB		VARCHAR2(10)	14	
SAL		NUMBER(8,2)	14	
COMMISSION		NUMBER(2,1)	14	
STARTDATE		DATE	14	
LASTDATE		DATE	14	
WORKING		DATE	14	

The execution plan shows a join operation between the DEPT and EMP tables. The status bar at the bottom indicates the execution time is 0.30 sec.

[22.3 – User-Defined Group Add]

The screenshot displays a software window titled '오션지 - [그래프 & 리포트(SYSDLOCAL)]'. The main content area is divided into several sections:

- Table:** A table titled 'MEMORY SQL - Library code hit ratio' with columns 'Time', 'Hit Ratio(Cumulative)', and 'Hit Ratio(Delta)'. The data shows a cumulative hit ratio of 99.957 across several time intervals.
- Graph Configuration:** A section titled '본래의 그래프 [비치 설정]' with input fields for '종류의 수' (set to 5) and '횟수' (set to 15). It includes a progress indicator 'Progress : 100 % (15 / 15)'. Below this, there are checkboxes for 'X 축 (데이터 항목)' and 'Y 축 (데이터 항목)', with 'Time' and 'Hit Ratio(Delta)' selected.
- Graph:** A line graph titled 'Library code hit ratio' showing the hit ratio over time. The Y-axis is labeled 'Value' and ranges from 0 to 99. The X-axis shows time intervals. The graph shows a sharp increase in hit ratio from 0 to approximately 99.957 within the first few time intervals, then remains constant.

At the bottom of the window, there is a small text box that reads '사용자 정의 그룹 혹은 항목을 추가한다.'

(Sid, Serial#, , SQL)

[27.2 - Session Information]

The screenshot shows the Oracle Enterprise Manager interface for a session. The 'Session Information' tab is selected, displaying a table of session parameters. The table has four columns: Name, Value, Name, and Value. The data is as follows:

Name	Value	Name	Value
SADDR	6821398	PREV_HASH_VALUE	342921388
SID	13	MODULE	Orange for ORACLE DBA - Seesk
SERIAL#	250	MODULE_HASH	260068000
AUDSID	0	ACTION	4.0.1 (Build 1)
PADDR	681E9FC	ACTION_HASH	43127577
USER#	0	CLIENT_INFO	
USERNAME	SYS	FOED_TABLE_SEQUENCE	2178
COMMAND	3	ROW_WAIT_OBJ#	-1
OWNER#	2147493644	ROW_WAIT_FILE#	0
TADDR		ROW_WAIT_BLOCK#	0
LOCKWAIT		ROW_WAIT_ROW#	0
STATUS	ACTIVE	LOGON_TIME	2005/04/24 21:09:01
SERVER	DEDICATED	LAST_CALL_ET	0
SCHEM#	0	PDML_ENABLED	NO
SCHEMANAME	SYS	FAILOVER_TYPE	NONE
OSUSER	LCS-NOTEBOOK\WAdminstrator	FAILOVER_METHOD	NONE
PROCESS	15961304	FAILOVER	NO
MACHINE	공북2\LCS-NOTEBOOK	RESOURCE_CONSUMER_GROUP	SYS_GROUP
TERMINAL	LCS-NOTEBOOK	PDML_STATUS	DISABLED
PROGRAM	OrangeMain.exe	PDOL_STATUS	ENABLED
TYPE	USER	PO_STATUS	ENABLED
SQL_ADDRESS	64E7A8C	CURRENT_QUEUE_DURATION	0
SQL_HASH_VALUE	342921388	CLIENT_IDENTIFIER	
PREV_SQL_ADDR	64E7A8C

[27.3 - Session Statistics]

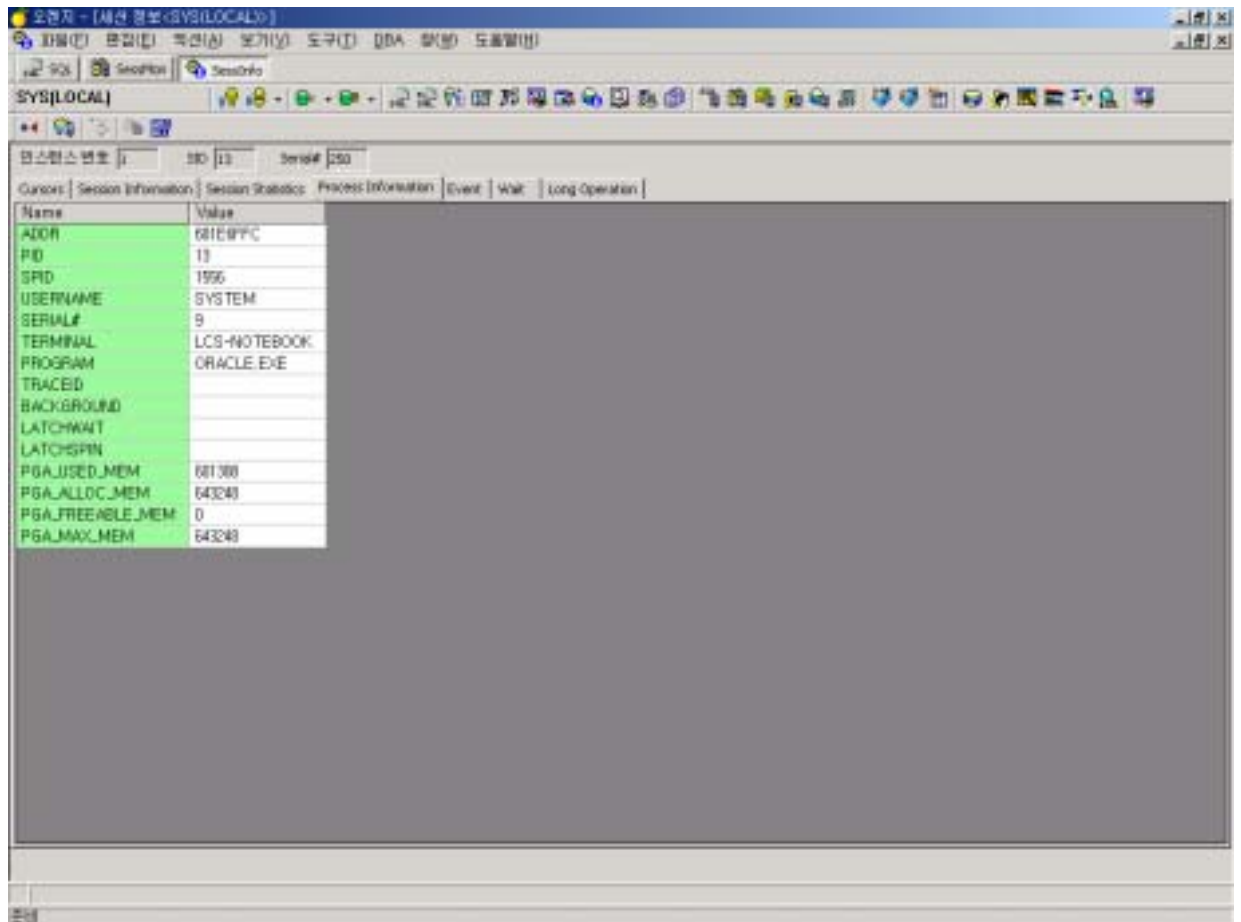

The screenshot shows the Oracle SQL Developer interface with the 'Session Statistics' tab selected. The table below represents the data shown in the interface.

Statistic#	Statistic	Value
0	logons cumulative	1
1	logons current	1
2	opened cursors cumulative	49
3	opened cursors current	5
4	user commits	0
5	user rollbacks	0
6	user calls	44
7	recursive calls	1,330
8	recursive cpu usage	4
9	session logical reads	252
10	session stored procedure space	0
11	CPU used when call started	34
12	CPU used by this session	34
13	session connect time	0
14	process last non-idle time	0
15	session uga memory	1,130,516
16	session uga memory max	1,202,980
17	messages sent	0
18	messages received	0
19	background fileorts	0
20	session sga memory	1,400,620
21	session sga memory max	1,678,764
22	enqueue timeouts	0
23	enqueue waits	0
24	enqueue deadlocks	0
25	enqueue requests	7
26	enqueue conversions	0

■ Process Information
